Liveable Exeter : Case Study

Liveable Exeter will build 12,000 new homes by 2040 across nine sites, all within Exeter, on land that has previously been developed. Their location supports growth without the need to build on the green fields that surround our city. The sites will become sustainable urban communities, with new homes, schools, leisure, retail and work spaces to create a thriving, connected city.

But what is a 'liveable' city, and what does this mean for Exeter?

A liveable city is a place:

- where residents feel safe and wellbeing is promoted
- that is socially connected and inclusive
- that is environmentally sustainable
- that provides a mix of housing, including social and affordable housing
- that has walking and cycling infrastructure
- that promotes access to nature and opportunity for biodiversity.

Over the past twenty years, Exeter has consistently been one of the fastest growing cities in the UK. As it has grown, it has become necessary to bring about change to support the wellbeing of citizens. Liveable Exeter is therefore more than 'just' housing, it is an opportunity for the city to change. It involves transport and infrastructure, health and wellbeing, sport, culture and recreation. It is a clear vision for the future of Exeter that allows the city continues to grow in a sustainable way.
